

## Parts for Hydraulic Boom Lift

### Part for Hydraulic Boom Lift - Shooting Forklift Booms or Telehandlers

Shooting forklift booms may also be referred to as telescopic booms or telehandlers and are specifically useful on rough terrains. This particular kind of boom could hoist workers to heights of 20-40 feet. These booms are typically utilized outside on construction jobsites or within the agricultural industry.

### Booms Should Not Be Used On Pipes

Extreme damage can happen to the interior of a pipe when using whichever kind of boom so as to transfer the pipe. It is suggested that a hauling sling be used in place of a pipe boom in this particular function. At times, cylinder shaped pipes and steel pipes must be transferred using a boom when a hauling sling is unavailable. In these instances, care should be taken to guarantee the pipes interior integrity.

### Other Types

Two additional booms can be used along with your lift truck; the low profile boom and the clear view boom. None of these booms connects to the carriage but instead connects to the forklifts' forks. They enable an easy transition from pallet to coiled or rolled things along with the extra advantage of offering a clear line of sight for the operator.

### Training for Safety

Forklift operators have to complete a training course in order to learn how to drive the equipment in the most practical and safe way. This guidance is intended to keep the operator safe as well as in order to avoid any injury to individuals working in the vicinity. Forklifts are a heavy piece of industrialized machinery and considered to be a potentially dangerous machine. People who work with and around them must comply with and know all of the safety precautions.

Additional training must be provided to individuals who will be dealing with forklift booms. This would make certain they understand how to carefully work the booms. Accidents have happened on the job from failure to safely work a boom. A number of makers provide training courses on the different types of booms and some provide on-site training where employees could be trained directly where they would be working. This on-hand training enables the guide a chance to address all safety concerns at that specific job location.
